## Ege Seramik Difference in High-Traffic Areas

*Ege Seramik's color body glazed porcelain products which combine the esthetic and the advantages of glazed porcelain by blending them with one another are the most suitable covering material for intensively-used areas.*

*This non-slip and stainless product group was designed for surfaces that are subject to abrasive materials and have a heavy traffic such as shopping malls, hotels, hospitals, and etc.*

*Color body products that are manufactured with color masse technique specifically for high-traffic areas offer the professionals the esthetics and functionality they seek.*

*In addition to rich size and color options, opaque, bright, lappato and rectification processes can be applied on these products that are also environment-friendly.*

*Ege Seramik color body glazed porcelain tiles are the right choice for those who do not want to compromise esthetics and quality even in the most intensively used areas.*

## Shade Variation

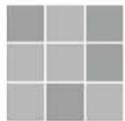

---

According to the changes in the prints of pattern due to the design of our products, the color tone changes indicated on the labels of the boxes are made as follows. When it is opened 1 box from the product you purchased, changes in the patterns and views between the tiles found in the box are varied with respect to the design of the products.

### **V1** Uniform Appearance

*Color and texture difference between the tiles from the same lot is very low which cannot be seen as a result of the nature of the material.*

### **V2** Slight Variation

*There are clear differences in surface texture and printing patterns among the tiles having similar colors.*

### **V3** Moderate Variation

*Main colors in one single tile can be found in other tiles. However color intensity shows differences between tiles. This is generally used in rustic tiles.*

### **V4** Substantial Variation

*Color differences can be observed from one tile to another. Thus, color of one tile can be different from another one. However, a harmony is observed between colors. These kinds of products can be found in the boxes in a random order. This is a design approach which is generally used in rustic tiles. Color and texture variation can be controlled in our facilities. This is a parameter, and it is developed in the stage of product development as a requirement of market demands and design.*
