DISABLED BATHROOM SUITS

Hayatı kolaylaştıran pratik çözümler.

Klasik klozetlerden farklı olarak 50 cm yüksekliğinde tasarlanan klozet ve yanlarında kullanılan yardımcı tutunma aparatları engelli ve yaşlı kişinin tekerlekli sandalyeden klozete rahatlıkla geçişini ve kolay kullanımını sağlıyor. Klozet yanında, yatay ve dikey hareket sağlayan, gerektiğinde klozet kağıdı taşıyıcısı takılabilen modelleri ile son derece fonksiyonel çözümler sunuyor.

Pratic solutions that makes life easy.

The closet is designed with 50 cm highness and this feature differentiate the closet from the classic closets. Combining the closet with the holding bars provides disabled persons or elders to move easily from the wheelchair to the closets and simplify their movements. This Series presents functional solutions with vertical and horizontal bars which can also be used as toilet rolls.

AQUASAVE SU TASARRUF SİSTEMİ

Az su ile etkin temizlik, hem de 38 farklı modelde ...

Aquasave Nedir?

Aquasave, Ege Vitrifiye klozetlerinde 4 litre, helâ taşlarında ise 5 litre ile etkin temizlik sağlayan TSE onaylı ilk ve tek su tasarruf sistemidir. Özenli tasarım çalışmaları ve laboratuvar testlerinden sonra; Diamas, Sura, Arna, Nysa, Alvona, Didyma, Harpasa, Teos, Mythos, Dropia, Tyana, Likya, Alia, Kapyra, Trendera, Bedensel Engelli, Simena klozetlerde 4 lt ile tam fonksiyon yapar hale getirilmiştir.

Üstün teknoloji kullanılarak basınçlı döküm sistemi ile üretilen Elipso, Pınara, Olympos, helâ taşlarında ise, 6 litre yerine 5 litre su ile tam fonksiyon yapması sağlanmış ve ayrıca bu proje ile ilgili de TSE onayı alınmıştır.

Klozetlerde 4 Litre ile Tam Fonksiyon nedir, nasıl sağlanır?

Klozetin 4 litre su ile tamamen temizlenebilirliği anlamına gelir. Burada dikkat edilmesi gereken en önemli konu, klozet formunun etkin temizlik sağlayabilecek şekilde tasarlanmış olmasıdır.

Aquasave, yıllardır pazara lanse edilen ve sadece iç takımla sağlanan daha az su tüketen sistemlerden bu nedenle farklılaşmaktadır. Zira az su kullanılarak temizlik sağlanmadığı diğer sistemlerde, rezervuardaki su tekrar boşaltılarak gereğinden fazla su kullanılmaktadır.

Ege Vitrifiye tarafından tasarlanan Aquasave özellikli klozetler suyu yönlendirmeye yarayan özel ring sistemi ve kirliliğin hızla tahliye edilmesine yarayan özel sifon yapısında 6 litre yerine 4 litre su ile etkin temizlik sağlamaktadır.

Bir aile Aquasave sistemli ürünler ne kadar su tasarrufu sağlar?

Türkiye'de konut başına düşen ortalama birey sayısı 5 olarak hesaplanmaktadır. Her hanede bir kişi günde ortalama 2 sefer tuvaleti kullanıldığı varsayılarak, 5 kişi x 2 kullanım = 10 kez rezervuar kullanılmasına sebebiyet vermektedir.

Böylece hane başına 6 litre X 10 kullanım = günlük 60 litre su tüketilmektedir.
(TSE normlarında standart bir rezervuar kapasitesi 6 litre olması nedeni ile)

Sadece 4 litre su ile etkin temizlik sağlayan Aquasave özellikli klozetler, bir aile için belirtilen kullanım şartları ile günlük 20 litre, yıllık ise 7300 litre / 7,3 ton su tasarrufu sağlar.

Aquasave özellikli helâ taşları ise 6 litre yerine 5 litre kullanımla yıllık 3650 litre / 3,65 ton su tasarrufu sağlar.

Su tasarrufu ürünlerle ilgili yapılacak tercihte dikkat edilecek en önemli hususlar:

Kullanım başına su tüketiminin minimum olması, bu minimum su ile etkin temizlik sağlanması ve bu sistemler için TSE onayının aranmasıdır.

Aquasave özellikli ürünleri kullanıma hazırlarken dikkat edilecek konular nelerdir?

Aquasave özellikli klozetler rezervuarları içerisinde 4 litre su seviyesi işaretlenmiştir. Kullanılacak rezervuar iç takımlarının 4 litre su akıtacak şekilde ayarlanması gerekmektedir. Helâ taşları ile kullanılacak rezervuar sistemlerinde ise rezervuarın 5 litre su akıtacak şekilde ayarlanması gereklidir.

AQUASAVE WATER SAVING SYSTEM

Efficient cleansing using less water, in 38 different models...

What is Aquasave?

Aquasave is the first and only water saving system approved by TSE, which provides efficient cleansing using 4 liters for Ege Vitrifiye toilets and 5 liters for cans. After attentive design studies and laboratory tests; Diamas, Sura, Arna, Nysa, Alvona, Didyma, Harpasa, Teos, Mythos, Dropia, Tyana, Likya, Alia, Kapyra, Trendera, Simena, Disabled Wc toilets become fully functional when using 4 liters and this project has been approved by TSE.

Also the cans produced by high pressure casting system using state-of-the-art technology become fully functional using 5 liters of water instead of 6 liters and besides this project also has been approved by TSE.

What is Full Function using 4 liters for toilets, how to do it?

It means the toilet can be fully cleaned using 4 liters of water. The main issue here is that the toilet form has been designed in order to allow an efficient cleansing.

Aquasave, differentiates from other systems using less water, which are introduced to the market for years and provided only with an inner kit. Other systems using less water and not cleaning cause more water to be used by emptying the water in reservoir.

Toilets with Aquasave designed by Ege Vitrifiye provide efficient cleansing using 4 liters of water instead of 6 liters because of its special ring system which allows directing the water and flushing structure which allows discharging all the dirty water.

How much water would be saved by a family using Aquasave system products?

In Turkey the average population for an apartment is around 5. Assuming every single individual in those apartments uses toilet 2 times on average in a day 5 people using the toilet twice a day means 10 times usage of reservoir in a day.

There by 6 liters x 10 times usage means 60 liters of water to be consumed in every apartment.
(Because a standard reservoir volume is 6 liters according to the TSE norms)

Aquasave toilets which allows an efficient cleansing using just 4 liters of water so considering specified terms of use it saves 20 liters of water in a day, it means 7300 liters, 7.3 tons of water.

Aquasave can save 3650 liters, 3.65 tons of water in a year by using 5 liters of water instead of 6 liters.

Important issues to be paid attention when making a choice amongst products saving water:

Those are to minimize water consumption, to provide efficient cleansing using that minimized water and to look for TSE approval for those systems.

What are the issues to be paid attention when preparing those Aquasave products?

Aquasave toilet reservoirs are marked inside at level of 4 liters. Reservoir inner kits to be used are needed to be set to release 4 liters of water.

Reservoir inner kits to be used for cans are needed to be set to release 5 liters of water.
