AQUASAVE WATER SAVING SYSTEM

Efficient cleansing using less water, in 25 different models...

What is Aquasave?

Aquasave is the first and only water saving system approved by TSE, which provides efficient cleansing using 4 liters for Ege Vitrikiye toilets and 5 liters for cans. After attentive design studies and laboratory tests; 56303 Sura, 46403 Arna, 46303 Arna, 36303 Nysa, 82213 Dropia, 82303 Dropia, 82313 Dropia, 68403 Didyma, 68303 Didyma, 85403 Harpasa, 85303 Harpasa, 78413 Teos, 78403 Teos, 78213 Teos, 72403 Tyana, 72413 Tyana, 72433 Tyana, 72303 Tyana, 12403 Likya, 15103 Kapia, 16103 Trenda, 52103 Disabled Wc, 70303 Simena toilets become fully functional when using 4 liters and this project has been approved by TSE.

Also the cans produced by high pressure casting system using state-of-the-art technology become fully functional using 5 liters of water instead of 6 liters and besides this project also has been approve by TSE.

What is Full Function using 4 liters for toilets, how to do it?

It means the toilet can be fully cleaned using 4 liters of water. The main issue here is that the toilet form has been designed in order to allow an efficient cleansing.

Aquasave, differentiates from other systems using less water, which are introduced to the market for years and provided only with an inner kit. Other systems using less water and not cleaning cause more water to be used by emptying the water in reservoir.

Toilets with Aquasave designed by Ege Vitrikiye provide efficient cleansing using 4 liters of water instead of 6 liters because of its special ring system which allows directing the water and flushing structure which allows discharging all the dirty water.

How much water would be saved by a family using Aquasave system products?

In Turkey the average population for an apartment is around 5. Assuming every single individual in those apartments uses toilet 2 times on average in a day 5 people using the toilet twice a day means 10 times usage of reservoir in a day.

There by 6 liters x 10 times usage means 60 liters of water to be consumed in every apartment.
(Because a standard reservoir volume is 6 liters according to the TSE norms)

Aquasave toilets which allows an efficient cleansing using just 4 liters of water so considering specified terms of use it saves 20 liters of water in a day, it means 7 300 liters, 7.3 tons of water.

Aquasave can saves 3 650 liters, 3.65 tons of water in a year by using 5 liters of water instead of 6 liters.

Important issues to be paid attention when making a choice amongst products saving water:

Those are to minimize water consumption, to provide efficient cleansing using that minimized water and to look for TSE approval for those systems.

What are the issues to be paid attention when preparing those Aquasave products?

Aquasave toilet reservoirs are marked inside at level of 4 liters. Reservoir inner kits to be used are needed to be set to release 4 liters of water.

Reservoir inner kits to be used for cans are needed to be set to release 5 liters of water.

Quality System Certificate

ISO 9001:2008 Quality Management System Certificate issued by Turkish Standarts Institute (TSE)

Products Quality Certificates

Product Conformity Certificate issued by Turkish Standarts Institute (TSE)

WaterMark

Australian Standarts (AS) Product Conformity Certificate issued by Global Mark (Australian Standarts Institute)

ASME (American Standarts) Product Conformity Certificate issued by IAPMO (American Standarts Institute)

EN (European Norms) Product Conformity Certificate issued by KIWA (Netherland Standarts Institute)

DIN (Germany Standarts) Product Conformity Certificate issued by LGA (Germany Standarts Institute)

NF (Norm of France) Product Conformity Certificate issued by AFNOR (France Standarts Institute)

N (Spanish Standarts) Product Conformity Certificate issued by AENOR (Spain Standarts Institute)
